

## NETGOVERN AUDIT & REMEDIATE + AI-Based Classification

Quickly and easily identify, review and remediate risky or sensitive information (e.g., PII, PHI and PCI). Uncover these vulnerabilities in real time with automated alerts. Automatically quarantine or delete improperly secured sensitive information.

### BUSINESS CASE

With the popularity of cloud technologies and the use of more business applications than ever before, combined with on-prem storage and legacy file servers, not only the data grows at an exponential rate but also the number of locations it's stored into. When thinking about security, privacy, and compliance this poses a variety of challenges. Amongst these challenges, jumping from a location to another to audit is time-consuming, unreliable, and never enough as new data is always created. Having efficient means of auditing unstructured data to locate sensitive information and automate certain tasks is essential to:

#### ▶ Reduce Risk

Auditing and improving data-centric security is due diligence that's protecting organizations from data breaches and non-compliance.

#### ▶ Reduce Cost

Auditing also reduces the costs related to regulatory fines, litigation, and disaster recovery in case of cyber incidents.

#### ▶ Improve productivity

The right tools help compliance, privacy, and security teams to gain visibility into data and remediate issues in minutes rather than hours.

### WHO BENEFITS FROM USING IT?

- ▶ Compliance
- ▶ Privacy
- ▶ Security
- ▶ IT

### WHY USE IT?

- ▶ GDPR, CCPA, PIPEDA, HIPAA, and other privacy laws compliance
- ▶ Boost data-centric security
- ▶ Clean repositories of sensitive and confidential data
- ▶ Merger & Acquisition due diligence
- ▶ Protection from phishing and other email threats
- ▶ Data classification before migrating to the cloud
- ▶ Data breach assessments

### AUDIT MANAGEMENT ROLES FOR AUDIT & REMEDIATE

**Admins:** Assign rights and permission to Audit Managers.

**Audit Managers:** Create cases, track, manage, edit, export, save, assign auditors and reviewers.

**Auditors:** View, search, comment, tag, save, and export audits within cases assigned to them.

**Reviewers:** View, comment, tag and save within subsets of data assigned to them.

**End users:** Search their personal archives and live mail.

## SOFTWARE FEATURES

- ▶ Provides a unified view of all on-prem and cloud data
- ▶ Indexes all data locations
- ▶ Search information in-place
- ▶ AI-Based Classification for PII, PHI, and PCI
- ▶ AI Compliance Automation
- ▶ Random Sampling of communications
- ▶ Faceted search
- ▶ Role-based access
- ▶ Audit active data
- ▶ Set alerts and receive automated reports by email
- ▶ Take remediation action directly from email reports
- ▶ Quarantine, move or delete identified issues
- ▶ Apply custom tags to search results
- ▶ Search and preview any file type
- ▶ Email retraction
- ▶ No coding skills required to search
- ▶ On-prem, cloud, or hybrid deployment

## 1-DAY ON-PREM DEPLOYMENT REQUIREMENTS

- ▶ Virtual Machine infrastructure (VMware, Hyper-V)
- ▶ Minimum 36 GB of RAM
- ▶ Minimum 350 GB of disk space
- ▶ Network & internet connectivity

## HIGHLIGHTS

### ▶ AI-based compliance automation

Complying with privacy laws is streamlined for organizations letting our automated tools perform the work. AI-based automatic classification significantly reduces false positives allowing for automated remediation to be put in place once systems are trained. This ensures zero-day compliance, and significantly reduces risk.

### ▶ Data-centric security automation

Choose to receive actionable regular reports or let NetGovern take action automatically to remediate issues with the non-complaint information stored across your organization. Move from reactive audits to real-time visibility and actions.

### ▶ Email retraction

The low level of technical elements in phishing emails makes them very challenging to intercept for Email Security Solutions. This feature adds a level of security ensuring that malicious communications making it to employee mailboxes can be retracted and deleted in a few clicks, or even pushed back after review if harmless.
